## 2 Key Findings

### Test Summary

The frontend suite is in strong shape overall: 15 of 16 user-flow tests passed, so the executable subset shows a 93.75% success rate and the app is generally behaving reliably. The only failure was in the contact flow, which means most core journeys — browsing the catalog, opening the How It Works content, and using the recommendation finder — are stable and user-facing navigation is working well. Because there were no backend results, this score reflects only the frontend portion of the run. The contact issue is isolated but important because it blocks the final lead-capture step.

### What could be better

The main weakness is the contact submission flow. The test `Submit a contact inquiry` failed because after clicking `Send message to Hertzler Systems`, the page showed: `We could not confirm that your message was sent. Please email chad@hertzler.com directly if needed.` That is a failure state, not the expected success confirmation, so users are not getting clear confirmation that their inquiry was received. Everything else passed, which suggests the issue is localized to the form submission / confirmation handling rather than a broader site stability problem.

### Recommendations

Fix the contact form success path first, since it is the only observed regression in an otherwise healthy frontend. Inspect the `Submit a contact inquiry` flow end to end: form submit handler, network request, and success/error state rendering. Make sure a successful submission produces a visible success confirmation instead of the fallback failure notice, and confirm the form clears or acknowledges the submitted data. After that, re-run the contact test plus the nearby passing flows (`Open the Hertzler contact page`, `Start contact after exploring the demo finder`) to verify the fix did not break navigation or related copy.

# Frontend UI Test Results

## 1 Test Coverage Summary

This report summarizes the frontend UI testing results for the application. TestSprite's AI agent automatically generated and executed tests based on the UI structure, user interaction flows, and visual components. The tests aimed to validate core functionalities, visual correctness, and responsiveness across different states.

| CATEGORY                   | TEST CASES | PASS/FAIL RATE  |
|----------------------------|------------|-----------------|
| How It Works               | 3          | 3 Pass / 0 Fail |
| Quality Improvement Finder | 7          | 7 Pass / 0 Fail |
| Contact & Follow-up        | 3          | 2 Pass / 1 Fail |
| Application Catalog        | 4          | 4 Pass / 0 Fail |

#### Note

The test cases were generated using real-time analysis of the application's UI hierarchy and user flows. Some visual and functional validations were adapted dynamically based on runtime DOM changes.

## 2 Test Execution Summary

| TEST CASE                                                   | TEST DESCRIPTION                                                                                                            | IMPACT | STATUS |
|-------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|--------|--------|
| How It Works                                                |                                                                                                                             |        |        |
| Learn what happens before a recommendation is shown         | Verifies that the How It Works content explains the recommendation experience from input selection through guidance output. | Medium | PASSED |
| Open the How It Works overview                              | Verifies that a user can access the How It Works section and see the educational overview of the recommendation flow.       | High   | PASSED |
| Review the decision flow steps                              | Verifies that the How It Works page presents the core decision flow users go through before getting a recommendation.       | High   | PASSED |
| Quality Improvement Finder                                  |                                                                                                                             |        |        |
| Recommend a solution for inspection frequency improvement   | Validates that a user can choose the inspection-optimization path and receive a suitable recommendation.                    | High   | PASSED |
| Recommend a solution for data-entry pattern investigation   | Validates that a user can choose the data-entry quality path and receive a matching recommendation.                         | High   | PASSED |
| Recommend a solution for predicted quality problems         | Validates that a user can choose the predictive quality-improvement path and receive a matching recommended solution.       | High   | PASSED |
| Recommend a solution for unusual measurements or batches    | Validates that a user can follow the anomaly-finding path and get a relevant recommendation.                                | High   | PASSED |
| Recommend a solution for control-chart signal investigation | Validates that a user can choose the control-chart interpretation path and receive a relevant recommendation.               | High   | PASSED |
| Explore all apps and open a demo app                        | Validates that a user can browse the full app catalog from the home experience and open one demo app successfully.          | Medium | PASSED |
| View how the recommendation finder works                    | Validates that a user can open the explanation of the guided recommendation flow from the home experience.                  | Low    | PASSED |

|                                                 |                                                                                                                 |        |        |  |
|-------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|--------|--------|--|
| Contact & Follow-up                             |                                                                                                                 |        |        |  |
| Start contact after exploring the demo finder   | Verifies a user can move from the guided solution finder into the contact pathway to continue the conversation. | Medium | PASSED |  |
| Open the Hertzler contact page                  | Verifies a user can navigate from the demo finder to the Hertzler contact page.                                 | High   | PASSED |  |
| Submit a contact inquiry                        | Verifies a user can send a follow-up message to Hertzler after exploring the demo.                              | High   | FAILED |  |
| Application Catalog                             |                                                                                                                 |        |        |  |
| Browse all applications                         | Verify the application catalog displays all available demo apps and their descriptions.                         | High   | PASSED |  |
| Open an app from the catalog                    | Verify a user can inspect an application's details and open its demo from the catalog.                          | High   | PASSED |  |
| Review solution guidance before choosing an app | Verify the guided finder helps a user review recommendations before opening a demo.                             | Medium | PASSED |  |
| Inspect how the solution finder works           | Verify the informational content explains how the application catalog recommends demos.                         | Low    | PASSED |  |

## Error

TEST FAILURE Submitting the contact form did not produce a visible success confirmation. Instead, the page displayed an explicit failure notice stating the message could not be confirmed as sent, so the required confirmation behavior was not observed. Observations: - After clicking 'Send message to Hertzler Systems', the page shows the red notice: 'We could not confirm that your message was sent. Please email [chad@hertzler.com](mailto:chad@hertzler.com) directly if needed.' - The contact form fields are populated (Your name: Jordan Lee; Your email: [jordan.lee@example.com](mailto:jordan.lee@example.com); message present) but no success confirmation or in-page echo of the submitted inquiry was displayed. Conclusion: The contact submission flow did not present the expected success confirmation nor a follow-up confirmation reflecting the submitted inquiry; the feature appears to be broken or the backend confirmation is unavailable. The test is marked as failed (success=false).

## Cause

The hosting-side contact submission flow likely cannot confirm delivery because the email/API backend is misconfigured, unavailable, or missing required secrets on the deployed app. As a result, the form submit handler hits its failure branch and shows the explicit red notice instead of a success confirmation. This can happen if environment variables were not set in the Streamlit deployment, the email service is down/blocked, the app lacks permission to send mail from the host, or the success response from the backend is not being detected correctly.

## Fix

Check the contact form backend integration on the host and restore a real success callback/confirmation path. If the app is using an email/API provider, verify the environment variables (API key, sender, destination address) are present in the hosting environment, the provider is reachable, and outbound requests are not blocked. Add robust error handling so a successful submission triggers a visible in-app confirmation, and ensure the app does not fall back to the red failure notice when confirmation is actually available. If no backend confirmation is possible on Streamlit hosting, implement a local acknowledgment message after form validation and queue/email the message asynchronously, or switch to a reliable mail service with proper server-side confirmation.
